(54) Title: FLAVAXATE DERIVATIVES AS MUSCARINIC RECEPTOR ANTAGONISTS

(57) Abstract: This invention generally relates to the derivatives of 3.6-disubstituted azabicyclo [3.1.0] hexanes of the following formula [IA]. The compounds of this invention can function as muscarinic receptor antagonists, and can be used for the treatment of various diseases of the respiratory, urinary and gastrointestinal systems mediated through muscarinic receptors. The invention also relates to a process for the preparation of the compounds of the present

invention, pharmaceutical compositions containing the compounds of the present invention and the :hlethods for treating the diseases mediated through muscarinic receptors.
